|   | Statistics and Probability   |  |  |  |  |
| Cluster   | NYS P-12 CCLS  | NYS Next Generation Learning Standard  |  |  |  |
| Draw informal comparative inferences about two populations.   |  | NY-7.SP.1 Construct and interpret box-plots, find the interquartile range, and determine if a data point is an outlier.  |  |  |  |
| usout two populations.  |  | Note: Students in grade 7 are <i>not</i> expected to <i>construct</i> box-plots that include outliers in the data, but students <i>are</i> expected to <i>interpret</i> box-plots that may contain outliers.   |  |  |  |
|   | 7.SP.3 Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability (mean absolute deviation) on either team; on a dot plot, the separation between the two distributions of heights is noticeable. | NY-7.SP.3 Informally assess the degree of visual overlap of two quantitative data distributions.   |  |  |  |
|   | <b>7.SP.4</b> Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations. For example, decide whether the words in a chapter of a seventh grade science book are generally  | NY-7.SP.4 Use measures of center and measures of variability for quantitative data from random samples or populations to draw informal comparative inferences about the populations.  Note: Measures of center are mean, median, and mode. The measures of variation |  |  |  |

longer than the words in a chapter of a fourth grade

science book.
